Introduction

The programme is designed based on the conception that: "a project manager or contract manager" will be more adept in evaluating and selecting a contracting system that is most appropriate to the requirements of the work and conforming to the economic, legal, cost, time and quality requirements and managing it efficiently and effectively, if they are knowledgeable in the principles and philosophy of construction law and operational aspects of the various project procurement and contracting systems". Contract managers are required to monitor the cost, scope, quality, and time frame and must ensure that all contract conditions are met. This important job affects both the financial and the actual success of the project or company.

**ABSTRACT**

An Analysis of Yukon Delta Salmon Management Rita Agnerisson, eastern Washington University The broad range of Pacific Alaskan salmon has resulted in the creation of a complex and multi-organizational system of management that includes the state of Alaska, various federal departments, a Congressionally-mandated fishery council, and a number of commercial and non-governmental fish organizations, in the Bering Sea salmon are caught by the commercial groundfish fleet as by-catch. On the Yukon River salmon are commercially and traditionally harvested for both economic and cultural sustenance by the Yupik residents of the Yukon Delta. Declining salmon populations has driven scientific research which considers the effects of Bering Sea salmon by-catch. My research findings indicate that Bering Sea fisheries occur where juvenile salmon mature, directly impacting Yukon River salmon populations. Further, the research reflects that although Yukon salmon populations have plummeted, a recent effort was made to open the northern Bering Sea, which includes the Yukon River coastal shelf, to deep-sea commercial fishing. By researching the relationship of policy to cultural salmon dependence, it becomes evident that Alaskan salmon-tribes are excluded from salmon management and decision-making. Legal research reflects that three basic federal Indian concepts - inherent rights, Indian Country, and tribal right of occupancy - emerge as potential foundations that may allow Alaskan salmon-tribes to begin sharing legal responsibility over salmon. Yukon River salmon are an international and anadromous species that require multi-organizational management. My research reflects that current management favors the Bering Sea commercial fishing industry, despite data indicating Bering Sea fisheries impact Yukon salmon populations and an overall downward trend in Yukon salmon populations.
