ABSTRACT

Landscape Architecture is arts and science of environmental designing with the main objective to improve living environment of human life. Consideration of all type of environmental user are needed as a platform to get the objective of 'caring society' in our country. Landscape Architect play a vital role to ensure all level of age can live together in harmony in our community. Elderly is a part of our community which the stereotype of them are associated with disabilities and they need special attention. This study will emphasize on the environmental needs of the elderly in order to contribute toward better living environment for the whole community.
