## **ABSTRACT**

The thesis is to design a parcel of the Kuala Kedah Riverfront Development. Kedah Economic Development Cooperation(UPEN) has been entrusted by the Kedah state government to design the waterfront as a recreational, cultural and historical base with the intention of turning the place into an urban riverfront park seek to develop it into a community and tourist center.

The intention of this thesis is to change the philosophy of the terminal ferry from a transit point, functional institution to a more relaxed and interesting. The event of going to the terminal as a by pass to Langkawi Island is less important, but as a place to meet friends and acquaintance. This can be done by designing a unique and interesting setting with a recreation atmosphere.

Through the design a ferry terminal building cum cultural market for the Kuala Kedah fishing village. This proposed thesis is expected to capture the 'spirit of the place' whereby it will portray the image of a fisherman village and maintaining the ambience of it's culture.
