APRIL 2010

Abstract

This writing is part of the thesis project which attempts to create an architecture that will focus on to promote and express awareness about ecological crisis happening today and in what way it can actually be done. The aim of this design exercise is to help people appreciate the ecology and at the same time educate them to be aware of what is happening to the environment nowadays. The thesis is done by going through several stages of process which are based on literature, case study, site selection and experimentation with architecture. The writing will describe the current issues related to the topic and how it is analyze and synthesize to form the architecture program as the development and progress goes on. Data and information basically are derived from many sources that include websites, institution, and journals/books and became a good supporting material for the thesis project. Taking Bukit Nanas as the site which itself reflect the issues and combining it with The Department of Forestry as the client makes this whole project as one.
