# Universiti Teknologi Malaysia (UTM) advances to #188 in QS World University Rankings 2024

JOHOR BAHRU, 28 June 2024

in the QS World University Rankings 2024

reaffirming its position among the world's top universities. With this achievement, UTM once again secures a place in the prestigious top 200 university league.

The QS World University Rankings evaluates universities based on several key indicators, including academic reputation, faculty expertise, research output, international diversity, student satisfaction, and now, the introduction of three new indicators: Employment Outcome, International Research Network (IRN), and Sustainability. The revised weightages for all nine indicators reflect a more comprehensive and holistic assessment of university performance.

**ABSTRACT**

An Analysis of Yukon Delta Salmon Management Rita Agnerisson, eastern Washington University The broad range of Pacific Alaskan salmon has resulted in the creation of a complex and multi-organizational system of management that includes the state of Alaska, various federal departments, a Congressionally-mandated fishery council, and a number of commercial and non-governmental fish organizations. In the Bering Sea salmon are caught by the commercial groundfish fleet as by-catch. On the Yukon River salmon are commercially and traditionally harvested for both economic and cultural sustenance by the Yugiik residents of the Yukon Delta. Declining salmon populations has driven scientific research which considers the effects of Bering Sea salmon by-catch. My research findings indicate that Bering Sea fisheries occur where juvenile salmon mature, directly impacting Yukon River salmon populations. Further, the research reflects that although Yukon salmon populations have plummeted, a recent effort was made to open the northern Bering Sea, which includes the Yukon River coastal shelf, to deep-sea commercial fishing. By researching the relationship of policy to cultural salmon dependence, it becomes evident that Alaskan salmon-tribes are excluded from salmon management and decision-making. Legal research reflects that three basic federal Indian concepts - inherent rights, Indian Country, and tribal right of occupancy - emerge as potential foundations that may allow Alaskan salmon-tribes to begin sharing legal responsibility over salmon. Yukon River salmon are an international and anadromous species that require multi-organizational management. My research reflects that current management favors the Bering Sea commercial fishing industry, despite data indicating Bering Sea fisheries impact Yukon salmon populations and an overall downward trend in Yukon salmon populations.

Declining salmon populations has driven scientific research which considers the effects of Bering Sea salmon by-catch. My research findings indicate that Bering Sea fisheries occur where juvenile salmon mature, directly impacting Yukon River salmon populations. Further, the research reflects that although Yukon salmon populations have plummeted, a recent effort was made to open the northern Bering Sea, which includes the Yukon River coastal shelf, to deep-sea commercial fishing. By researching the relationship of policy to cultural salmon dependence, it becomes evident that Alaskan salmon-tribes are excluded from salmon management and decision-making. Legal research reflects that three basic federal Indian concepts - inherent rights, Indian Country, and tribal right of occupancy - emerge as potential foundations that may allow Alaskan salmon-tribes to begin sharing legal responsibility over salmon. Yukon River salmon are an international and anadromous species that require multi-organizational management. My research reflects that current management favors the Bering Sea commercial fishing industry, despite data indicating Bering Sea fisheries impact Yukon salmon populations and an overall downward trend in Yukon salmon populations.
